MANTIS
GRAB + ENGAGE

CAPABILITY STATEMENT

Summary

Mantis Gear LLC is a USMC Veteran owned company located in Landrum, SC. Derrick Willard, owner and creator of the Mantis, took his knowledge and experience gained while enlisted as an amphibious assault vehicle operator and law enforcement officer to create a patented new revolutionary, tactical, mobile balance restraint system to replace the outdated traditional sling. This will improve the operator's form, function, and endurance. The Mantis is a game changer for the future of slings and beyond. Mantis gear recently attended the Modern-Day Marine Convention in Washington, DC and received tremendously positive feedback including a CWO 5 stating the Mantis would be ideal for Special Forces. The Mantis is fully operational, ready for military field testing, and ready for manufacturing.

Capabilities

- Provide operators an ergonomic and efficient way to keep their weapon at high ready to combat muscle fatigue.
- Secures the weapon to his/her person leaving them with hands-free mobility, more comfort, flexibility and movement of the rifle and combat gear.
- The Mantis tool strap uses two powerful magnets with a quick release handle that detaches and reattaches the rifle in a horizontal position or diagonal location and allows attachment of a wide assortment of tools.

Differentiators

- The Mantis provides a stable target acquisition due to the constant cable tension from over the shoulder **VS.** the traditional sling is across the body with no tension assist.
- The Mantis distributes the weight load of the weapon evenly across the body to reduce muscle fatigue as the shoulder acts as a fulcrum **VS.** the traditional sling uses the shoulder to carry the full weight of the weapon.
- The Mantis stabilizes the weapon and better integrates with the Molle gear **VS.** the traditional sling drags across the body armor and gear making it more cumbersome.
- The Mantis allows for one hand ambidextrous operation of tactical positions **VS.** the traditional sling requires use of both hands.
- The Mantis allows for simultaneous multi weapon use **VS.** the traditional sling allows for only one weapon use at a time.
